DETAILED ACTION

Response to Amendment

1. The amendment filed 11/5/2006 is hereby acknowledged.

Allowable Subject Matter

2. Claims 1-4 & 9-10 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding Claim 1: The claim is considered allowable based on the limitation that the functional relationship between the pulse count (i.e. the delay period d_2 from h-sync detection to the start of image formation) of the first and second sides is $d_2 = d_1 * F(x)$; whereas the prior art teaches a functional relationship of $d_2 = d_1 + F(x)$. The specifically claimed $F(x)$ as equaling to $1/(1+x/100)$ is interpreted to be an optimal value of $F(x)$, and optimization of a pre-established relationship is considered to be non-inventive and involves only routine skill in the art. It is examiners opinion that any representation of $F(x)$ in multiplicative relationship to the delays is sufficient to suggest the claimed limitation. However, the relationship $d_2 = d_1 * F(x)$ is distinguishable from the previous relationship of $d_2 = d_1 + F(x)$ in that the relationship is multiplicative as opposed to additive, thus it allows for a greater degree of control over the second delay time (i.e. pulse count). This multiplicative relationship was not found in the prior art.

Regarding Claims 2-4: The claims are allowable as depending from an allowable base claim.

Art Unit: 2861

Regarding Claim 9: Similarly to claim 1, claim 9 is considered allowable based on the limitation that the functional relationship between the pulse count (i.e. the delay period d_2 from h-sync detection to the start of image formation) of the first and second sides is $d_2 = d_1 * F(x)$; whereas the prior art teaches a functional relationship of $d_2 = d_1 + F(x)$. The specifically claimed $F(x)$ as equaling to $1/(1+x/100)$ is interpreted to be an optimal value of $F(x)$, and optimization of a pre-established relationship is considered to be non-inventive and involves only routine skill in the art. It is examiners opinion that any representation of $F(x)$ in multiplicative relationship to the delays is sufficient to suggest the claimed limitation. However, the relationship $d_2 = d_1 * F(x)$ is distinguishable from the previous relationship of $d_2 = d_1 + F(x)$ in that the relationship is multiplicative as opposed to additive, thus it allows for a greater degree of control over the second delay time (i.e. pulse count). This multiplicative relationship was not found in the prior art.

Regarding Claim 10: The claim is allowable as depending from an allowable base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
